

ABSENS ATOMUS

Paper V

The Floor Closest to the Abyss

Truth, lie, and the contradiction as the last reachable thing before absence

Speculative. A descent, not a proof. Written to be attacked at the descent.

Why this paper exists

The earlier papers hunted for a zero-point of difference, a floor beneath which distinction cannot go, because the status of that floor decides whether the whole program is substantive or merely analytic. This paper approaches the floor from a different direction, through truth and falsehood rather than through structure and ink. It is more speculative than the others and I mark it so plainly. It is a descent by reasoning, not a proof, and its purpose is to locate what sits at the very bottom, one layer above absolute absence. The claim it arrives at is that the last reachable thing before absence is a contradiction, and that this rejoins the contradiction the whole program opened with.

1. Truth and lie as a dependent pair

Take a truth, that a thing is a mango. Take its lies, that it is not a mango, that it is the wrong shape, that it does not look like one. The truth is single, one way the thing is. The lies are many, endless ways to miss the one target. But the many lies share a single nature, falsehood, and that nature is

parasitic. A lie is a lie only relative to the truth it departs from. Remove the mango-truth and no lie about the mango can stand, because there is no longer a target to miss. The truth, by contrast, needs no lie in order to be true.

So truth and lie form a dependent pair. Each requires the other as its final dependency, the truth as the thing that is the case, the lie as the departure from it. Neither is deeper than the other in content. They occupy the same floor, the floor of statements about a subject.

2. The pair is undeletable

Now try to remove the pair. Delete the truth that it is a mango. You do not reach silence. You reach a new truth, that there is no mango. Truth's death is another truth's birth. Try instead to let only lies remain, a zone where it is a mango cannot be truly said but it is not a mango still applies. Here the pivotal step. For the lie it is not a mango to apply, to fit, to hold of that zone, it must describe the zone correctly. A falsehood that correctly describes a situation is no longer a falsehood. It has become the true statement that there is no mango here. The lie reaches the zone only by turning into a truth.

So the pair cannot be removed. Delete the truth and truth regenerates as its own negation. Let the lie reach further and it converts into truth on arrival. Every attempt to remove one term produces the other. The truth-lie pair is undeletable, self-regenerating under any attempt at erasure.

3. The undeletable pair is a contradiction

Consider what the undeletable pair is at the edge, where truth is dying and its negation is being born in the same motion, where the lie is falsehood and, by fitting, truth at once. At that edge true and false are no longer two separable things. They are one knot that cannot be untied or removed, whose deletion is its own persistence, whose falsehood is its own truth. That knot is a contradiction, in the exact sense, a thing that is and is not in the same respect, that cannot be made to rest on either side.

The last reachable thing before absence is a contradiction, the undeletable knot of truth and lie, the one structure whose attempted removal only regenerates it.

4. Why the contradiction is closest to the abyss, and why it still does not reach

It may seem wrong that a contradiction, which is maximally full, holding a thing and its negation at once, should be the nearest neighbor to absence, which is maximally empty. The resolution is that the contradiction is closest to absence not by emptiness but by instability. It is the fullest thing that cannot stay. It holds everything and therefore can hold nothing still. That inability to remain is the direction of absence. The contradiction is the last thing that tries to be and cannot, and absence is where even the trying stops.

But it does not reach absence. A contradiction still has terms. It needs a truth to preserve and a lie to distort, a subject, a mango to affirm and deny. Absence is the removal of even the terms, the place where there is no mango for any statement true or false to be about. The contradiction is the floor. Absence is the falling away of the floor. They touch, and do not merge.

5. The loop the program closes

The program opened with a contradiction found by looking at absence directly, that absence must be to be absence, yet being violates absence. This paper arrives at a contradiction by descending through truth and lie from the other side. The two meet. The contradiction is not something hidden inside absence to be observed. It is the last floor before absence, the undeletable knot that regenerates when removed, standing one layer above the abyss. The opening contradiction and the closing contradiction are the same edge seen from two directions, from below by staring into absence, from above by descending through truth and falsehood until they fuse.

6. Where this is weak, stated plainly

This descent leans on a claim that deserves the hardest scrutiny, that a lie which correctly applies has become a truth. A critic may hold that applies and is true are not the same, that a false statement can be apt or useful without being true, and that the conversion of lie into truth on arrival is a trick of words. If that step fails, the pair may not be undeletable in the way claimed, and the contradiction may not sit where this paper places it. A second weak point, the identification of the undeletable pair with a contradiction in the strict logical sense may equivocate between a contradiction, which is a proposition of a certain form, and an unstable ontological knot, which is something else wearing the same name. The paper treats them as one and a critic should test whether they are. Third, the whole descent is by intuition and reasoning, not by formal derivation, and its conclusions have the status of a proposed map of the lowest floor, not a proven one.

End of Paper V.
